REASONS FOR ALLOWANCE

1. During a telephone conversation with Attorney, Mr. John Larson, on February 17, 2004, Examiner requested selection of species. The Attorney made a provisional election with traverse to prosecute the invention of the first embodiment, i.e. Claims 1 – 13, 17 – 20. However, a further analysis of the Application revealed that allowance of the generic Claim 1 makes the non-elected species (second embodiment) including Claims 14 – 16 also allowable. Therefore, the request for selection of species is withdrawn.

2. The following is an examiner's statement of reasons for allowance:

An amended independent Claim 1 discloses a plurality of independently powered power domains. The power domains receive plurality of status signals and output plurality of power signals representing power supply voltages; each domain being connected to at least one other power domain; and a domain notification circuit connected to a first domain receiving power signal from the first domain and second power domain and outputting a status signal to the first domain indicating a power condition of the second power domain.

The closest reference for the claim is Langer et al. (US 5,381,554), which discloses some of the elements of the Claim such as a plurality of power domains (UPS elements 32 and 36 in Fig. 2) independently powered (by their reserve batteries, col. 3, lines 6 – 9). The power domains receive plurality of status signals and output plurality of

Art Unit: 2836

power signals representing power supply voltages (col. 3, lines 22 – 29); each domain being connected to at least one other power domain (col. 3, lines 25 – 29); and a domain notification circuit (Fig. 3) connected to a first domain (it is installed in the first domain) and receiving power signal from the first domain. It further discloses outputting a status signal to the first domain by the domain notification circuit indicating a power condition of the second power domain (col. 3, lines 65- 66).

However, the power domain of the reference (such as the first power domain), does not receives the power signal form the second power domain. Instead, it receives through communication channel the signals indicating the power status of other domains and each power domain determines its power conditions by itself. In contrast, in the structure disclosed by Application, the common domain notification circuit determines abnormal power conditions in all other domains. The structure disclosed by Langer et al. is definitely different from the structure of Claim 1 of the Application. No other secondary reference, which could help to resolve a primary reference deficiency, was found.

Regarding Claims 14 – 16, they all are dependent directly or indirectly on Claim 1 and therefore are allowable.

As to another independent Claim 17, it recites over again the same limitations as Claim 1, thus overcoming the Langer et al. reference.

Allowability resides, at least in part, in the above-described limitations, which has not been disclosed in the Prior Art in a search.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The examiner can normally be reached on 8:00 – 4:30. If attempts to reach examiner by telephone are unsuccessful, the examiner's supervisor, Brian Sircus can be reached on (571) 272 – 2800, Ext. 36.
